DETAILED ACTION

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Patent number 6,251,236 is directed to a cathode ring for electrochemical deposition. Patent number 6,277,336 is directed to a mountable contact element. Patent 6,444,101 is directed to a conductive biasing member. Patent number 6,773,560 is directed to dry contact assemblies for electroplating machines. Patent number 7,087,144 is directed to a contact ring with embedded flexible contacts.

2. The following is an examiner's statement of reasons for allowance: As shown by the cited patents, electroplating apparatus and methods using a contact ring are known. The prior art of record does not disclose or suggest a dual contact ring for electroplating metal and removing metal from a selected region of a substrate which includes a first ring for contacting a substrate, a second ring for contacting a selected region on the substrate, a negative voltage source connected to the first ring and a positive or ground voltage source connected to the second ring.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
